

HTML (& CSS)

Why do we need both
HTML and CSS?

HTML ⇒ Structure

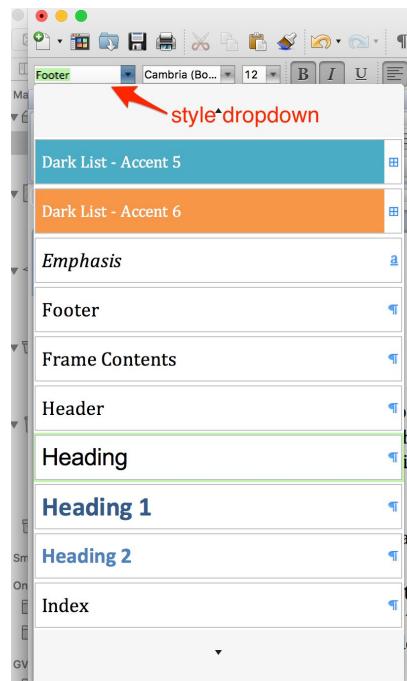

CSS ⇒ Style

3

Styles in
Microsoft Word

4

History of HTML

- 1989 Tim Berners-Lee, CERN Lab (Switzerland)
 - How to share research papers
- 1991: WWW Talk presentation of HTML
- Marc Andreessen National Center for Supercomputer Applications
 - Mosaic browser (1993)
- 1995 Release of **Java (by Sun Microsystem) & Javascript (by Netscape)**

5

HTML Versions

- 1991 HTML (20 tags/elements)
- 1995 HTML 2.0
- 1997 HTML 3.2
- 1999 HTML 4.01 (1st release of CSS)
- 2000 XHTML (HTML + XML)
- 2014 HTML5
- **Latest standard HTML 5.3 (Oct 2018)**

```
1  <!DOCTYPE html>
2  <html>
3      <head>
4          <title>Example</title>
5          <link rel="stylesheet" href="sty-
6      </head>
7      <body>
8          <h1>
9              <a href="/">Header</a>
10         </h1>
11         <nav>
12             <a href="one/">One</a>
13             <a href="two/">Two</a>
14             <a href="three/">Three</a>
15         </nav>
```

6

The ultimate **first** website

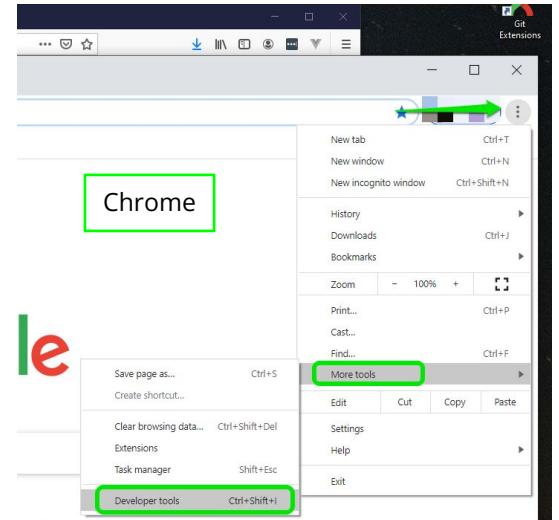

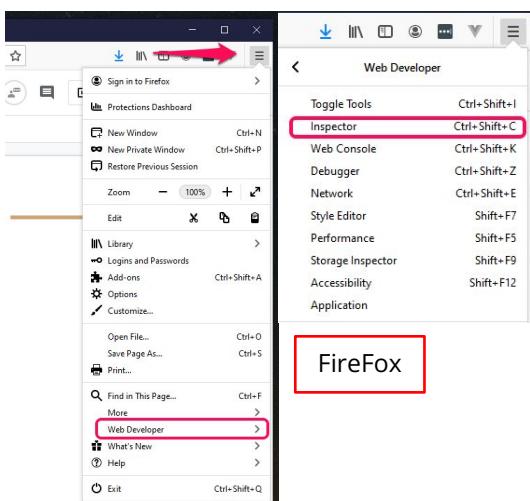

<http://info.cern.ch/>

.ch = TLD for Switzerland

7

(try it yourself)

9

HTML

- Hypertext Markup Language
- **Not** a programming language, but a *presentation* language
- Code for **structuring** and **displaying** a web document
- Vocabularies
 - Tags/Elements
 - Attributes
 - key="value"
 - "boolean"

10

VSCode Demo

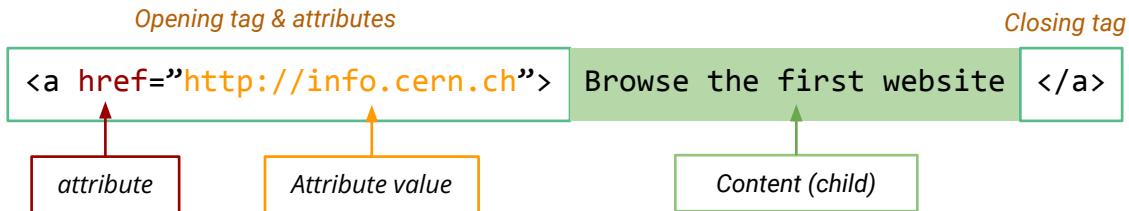

11

VSCode Demo

- Screencast Mode On (for instructor's)
- Use **Open Folder** (instead of Open File)
- Search **Command Palette** (F1 or Ctrl-Shift-P)
- Emmets
- Multi Cursor (Ctrl-D)
- Code assist / suggested completion
- Extensions
 - Prettier (pay attention to automatic indentation)
 - Live Server

12

HTML Elements/Tags/Nodes

13

Empty Elements

- No closing tag
- No (child) content

```
<link rel="stylesheet" href=".....">
```

```

```

14

Type of Elements

Two categories of HTML elements based on their effect on **new line**

- **Block:** induces a new line **before** and **after** its surrounding context
 - Examples: p, h[1-6], ol, ul, pre, blockquote, dl, div, form, hr, table
- **Inline:** contained within block-level elements **without starting newlines**
 - Examples: b, i, tt, code, em, strong, a, br, img, span, sub, sup, button, input, select

15

Inline vs Block Elements

```
<!-- block elements -->
<p>I taught myself</p><p>HTML</p>
```

I taught myself

HTML

```
<!-- inline elements -->
<span>And also</span>
<span>CSS</span>
```

And also CSS

16

Overall Structure of HTML Documents

```
<html>
  <head>
    <meta charset="UTF-8">
    <title>Sample Page</title>
  </head>

  <body>
    <h1>Welcome</h1>
    <p>Hello world!</p>
  </body>
</html>
```

Document is parsed:

- Left-to-right
- top -to-bottom
- Understanding this order becomes important when you write `<script>`

`<head>`: parsed by web browsers, but **not rendered**

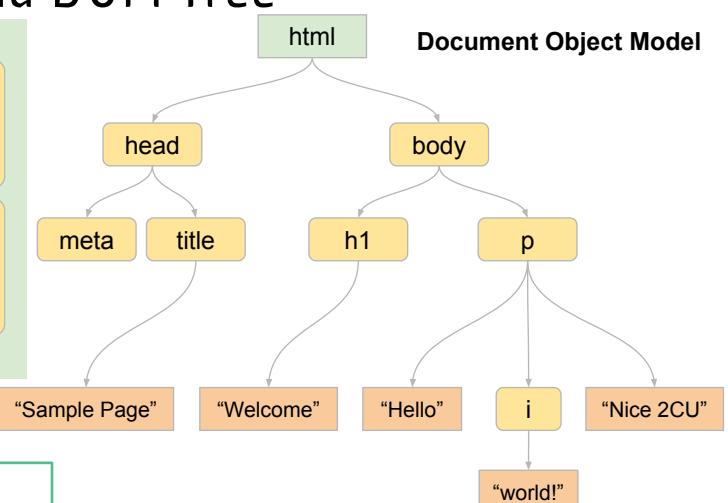

`<body>`: **parsed and rendered** by web browsers

17

HTML Documents and DOM Tree

```
<html>
  <head>
    <meta charset="UTF-8">
    <title>Sample Page</title>
  </head>

  <body>
    <h1>Welcome</h1>
    <p>Hello <i>world!</i> Nice 2CU</p>
  </body>
</html>
```

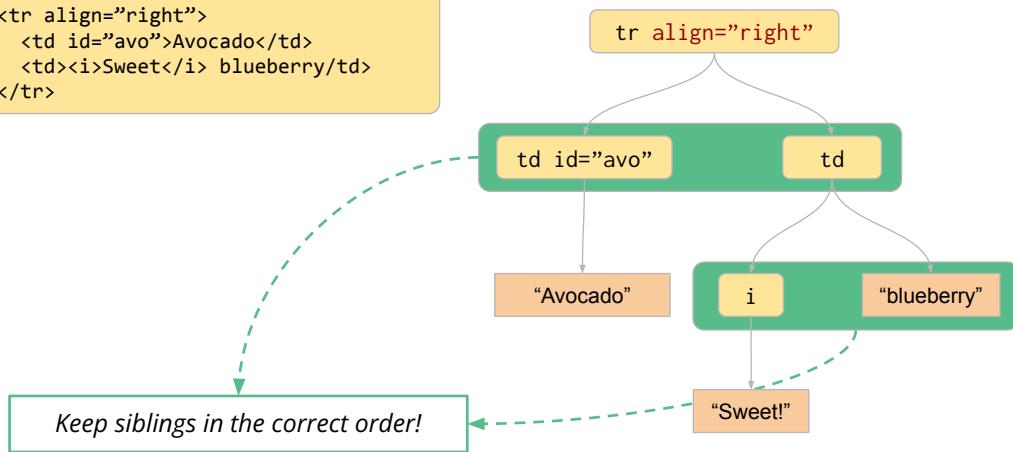

Parent-child, siblings (older vs younger)
Use indentation result (of "Prettier") as hint

18

Attributes stay with its element

```
<tr align="right">  
  <td id="avo">Avocado</td>  
  <td><i>Sweet</i> blueberry</td>  
</tr>
```

19

Group Exercise:
HTML to DOM Tree

20

HTML Tags/Elements

- [Alphabetical List](#)
- [Categorical List](#)

21

`<meta>`

- Meta tags are used for “machine readable” information about the document
 - Document character encoding
 - Content Description for web bots
- App specific metadata that can be used to customize embedding of web contents into another (app)
 - Facebook
 - Twitter
 - Pinterest
 - Slack
 - WhatsApp, and many more...

22

Comments and Special Characters

```
<!-- this is a comment -->
```

Special Character	Encoding
<	<
>	>
&	&
“	"
‘	'

```
<!-- in HTML -->  
Bonnie & Clyde
```

Bonnie & Clyde
